

## Water Tank Problem

Given "n" always greater than -1, representing the block height. Now compute the units of water stored in-between the blocks. Build a Web Application (Frontend Solution) using **Vanilla JavaScript and HTML/CSS** to represent the solution. Share the code and snippets in a Git repository.

Hint: Generate SVG Shape (preferred) or Table View like the one below.

### Example

Input: [0,4,0,0,0,6,0,6,4,0]

Output: 18 Units
